BREATHE PURER AIR ENJOY A CLEANING AWNING

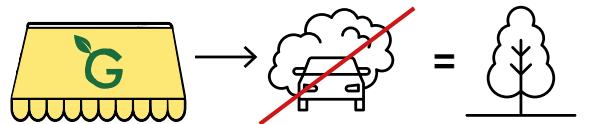

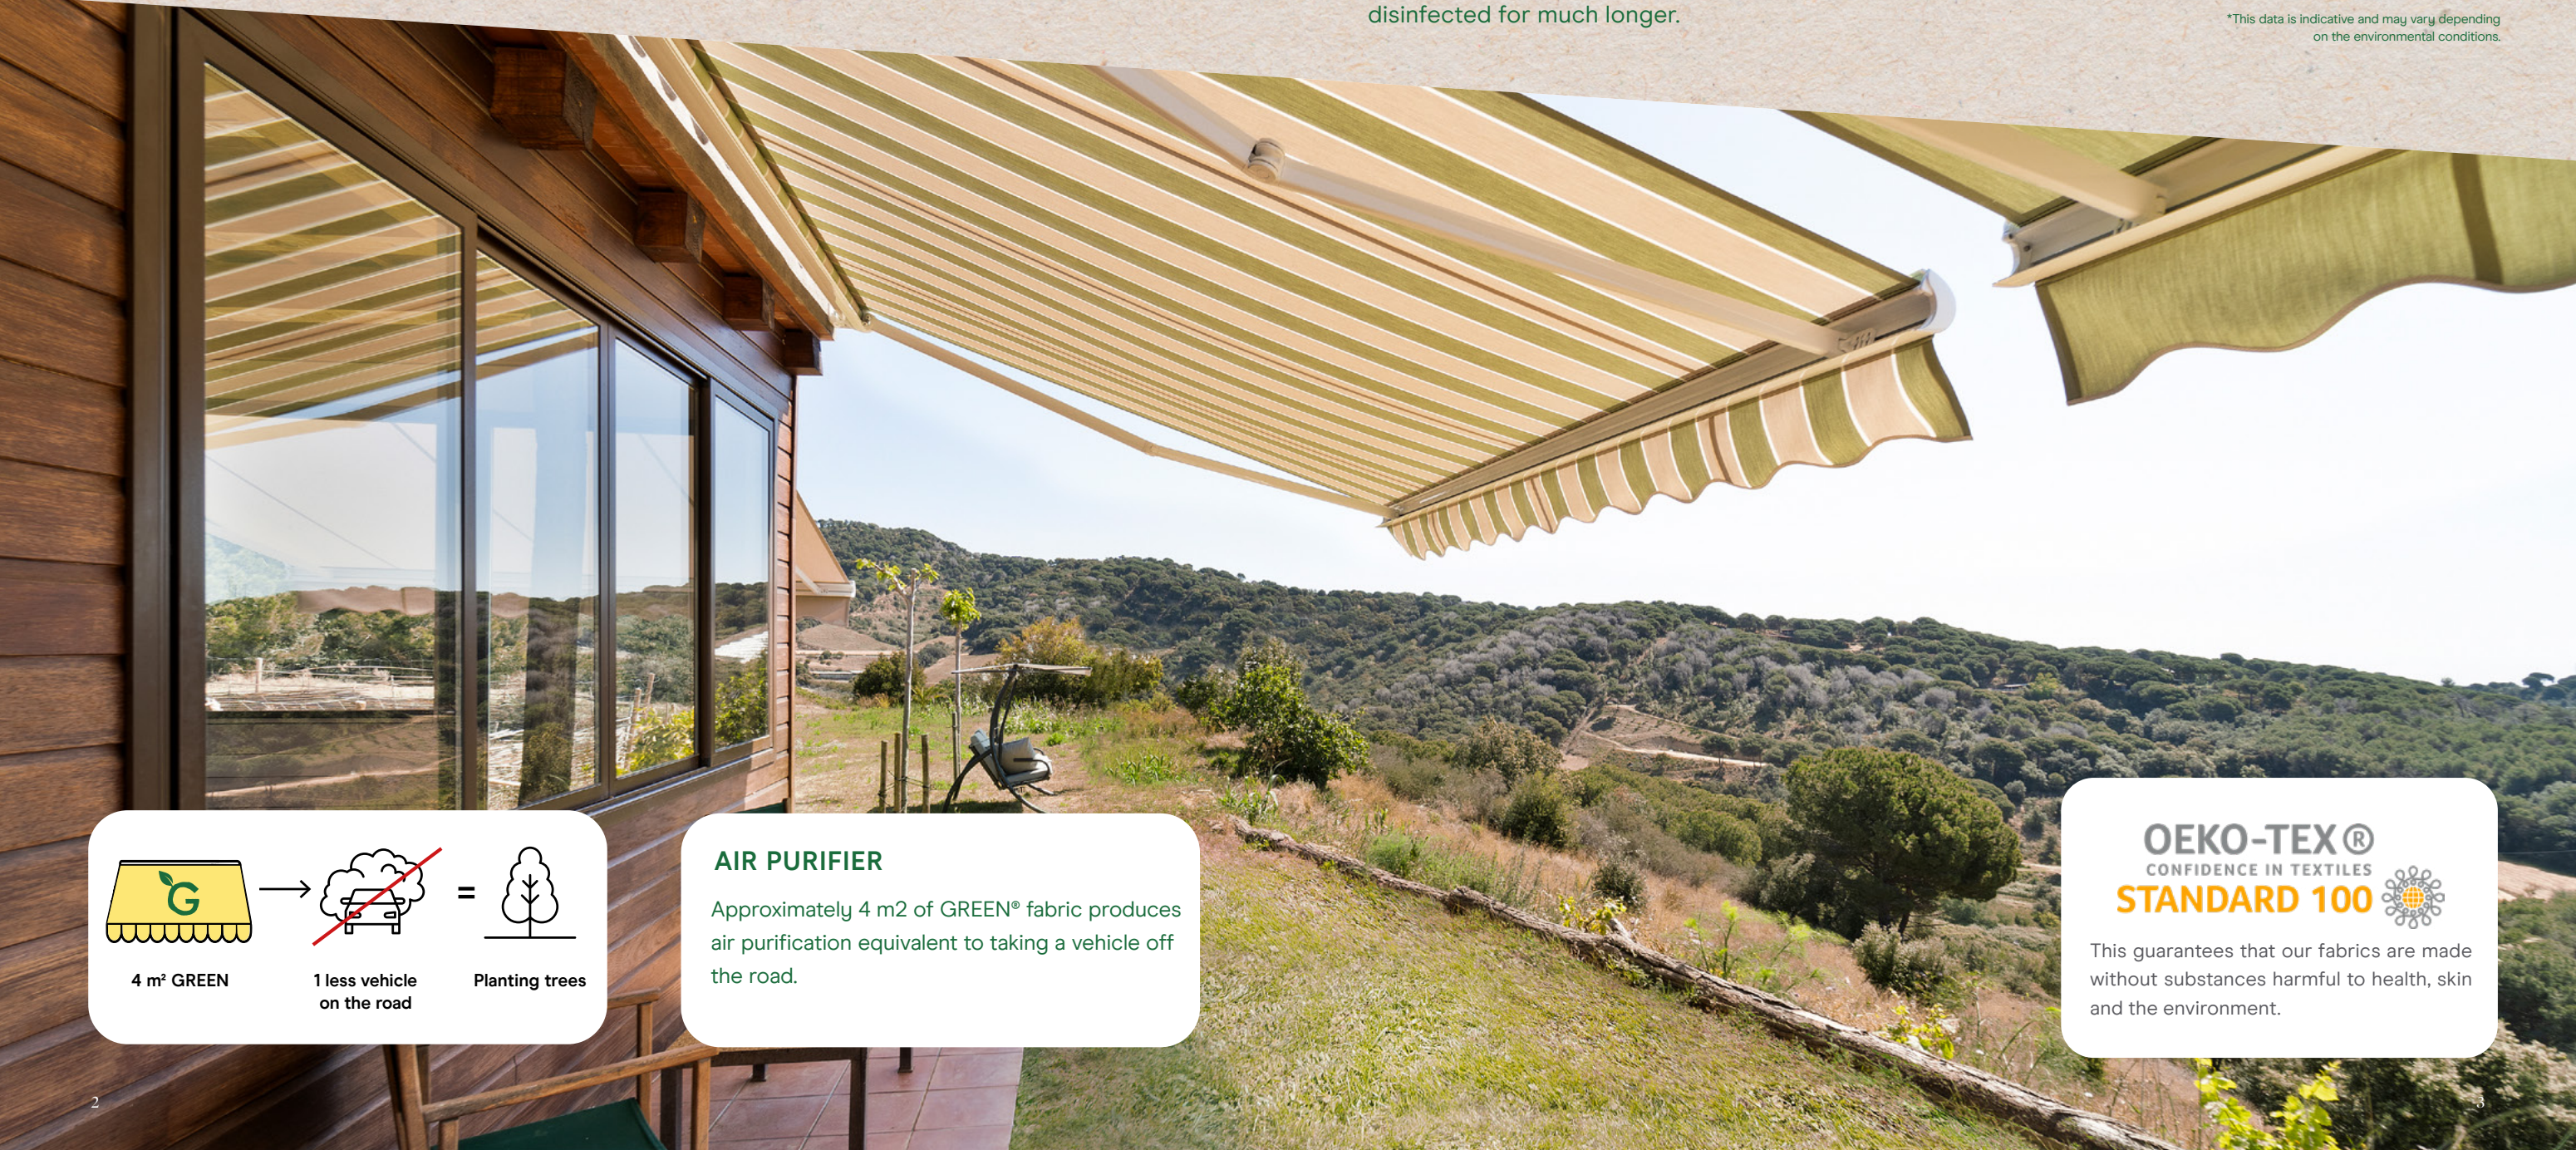

GREEN® IS HEALTH AND QUALITY OF LIFE

Green® fabric for awnings and parasols cleanses and purifies the air through photocatalysis. Eliminating pollutants such as nitrogen dioxide, so you can breathe cleaner air.

In addition, Green® fabric has a self-cleaning and mold-reducing effect. So that your awning or parasol stays clean and disinfected for much longer.

*This data is indicative and may vary depending on the environmental conditions.

AIR PURIFIER

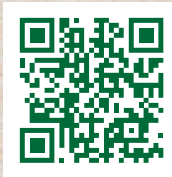

Approximately 4 m2 of GREEN® fabric produces air purification equivalent to taking a vehicle off the road.

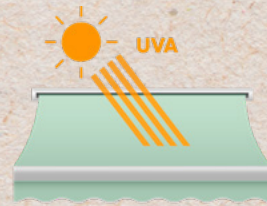

This guarantees that our fabrics are made without substances harmful to health, skin and the environment.

Photocatalysis. How does it work?

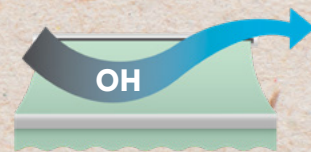

1 GREEN® is a fabric coated with titanium dioxide (TiO₂) nanoparticles.

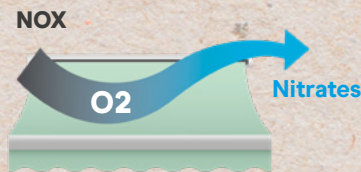

2 When UVA rays hit GREEN fabrics, a chemical process begins that converts oxygen and water vapor from the atmosphere into OH and O₂ cleaning agents.

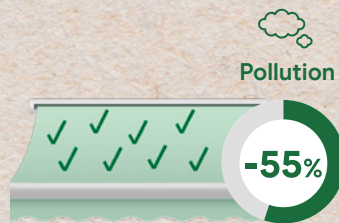

Organic compounds + VOCs → Minerals + gas + H₂O

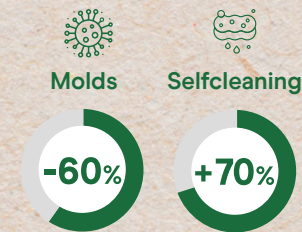

3 OH converts organic dirt and volatile organic compounds into minerals and gas and returns to H₂O.

4 O₂ reduces nitrogen oxide (NoX) one of the most harmful gases present in the atmosphere, to relatively harmless nitrate.

5 This process is repeated millions of times to clean the surface and the air that comes into contact with it, reducing nitrogen dioxide levels by 55% in laboratory tests.

6 GREEN® also produces an approximate reduction of mold by 60% and have a self-cleaning effect of around 70%.

*This data is indicative and may vary depending on the environmental conditions.

CLEANING INSTRUCTIONS

Because of the special GREEN® coating, it is important to clean the sun protection cloth carefully. When cleaning it is important not to use cleaning agents, only water and a soft sponge are sufficient. Then lay out the cloth to dry thoroughly.

SELF CLEANING AND DISINFECTION

GREEN® fabric has a laboratory-tested self-cleaning and disinfecting effect that makes your awning or parasol stay cleaner for a longer time.

The difference is visible to the naked eye.
